

ArogyaRakshak

An evidence-grounded healthcare administration platform

When managing diabetes becomes an administrative battle.

Evidence-grounded financial & administrative support for patients and caregivers — built on an existing ArogyaRakshak platform, focused here on diabetes care.

THE PROBLEM

The medical journey isn't the only journey.

For a lifelong condition like diabetes, the paperwork never really ends — and it rarely goes in a straight line.

The information may exist. The problem is navigating it.

~101M

people in India live with diabetes

ICMR–INDIAB national study, The Lancet Diabetes & Endocrinology, 2023

43.4%

of India's health spending is paid out-of-pocket by households

National Health Accounts Estimates for India 2022–23, Union Ministry of Health & FW

One case. One evidence trail. One guided workflow.

“AI does not decide for the patient. It makes the evidence understandable and actionable.”

We're not starting from a blank screen.

ArogyaRakshak is a real, working monorepo today — six modules sharing one document-intelligence layer, Kadi.

Kadi

Shared document
intelligence layer

BillNyay

Hospital bill audit
vs. CGHS rates

DaaviSetu

Pre-auth & claim
document prep

BimaNyay

Denial analysis &
appeal drafting

SchemeSetu

Government scheme
eligibility

DawaCheck

Medicine price
benchmarking

also in the platform — not the focus here

THIS HACKATHON

Diabetes Care — Financial & Administrative Support

Kadi + BillNyay + DaaviSetu + BimaNyay + SchemeSetu, focused into one guided workflow for a patient or caregiver managing diabetes.

Focused diabetes
administrative workflow

Upload once. Don't explain your case five times.

YOU UPLOAD

Hospital discharge document

Hospital bill

Insurance policy

Scheme document

AI assists. Humans remain in control.

AROGYARAKSHAK CAN

- ✓ Extract & organize document information
- ✓ Surface relevant insurance / scheme pathways
- ✓ Identify missing information
- ✓ Compare requirements against official sources
- ✓ Prepare administrative drafts

AROGYARAKSHAK DOES NOT

- ✗ Diagnose
- ✗ Recommend treatment
- ✗ Make clinical or insurance decisions
- ✗ Interpret medical data for clinical use
- ✗ Give autonomous medical advice

EVERY OUTPUT IS LABELED BY WHERE IT CAME FROM

Machine-derived

Human-reviewed

Human-authored

External source

Patient-provided

Dr. Priyal Kulkarni, BAMS validates workflow assumptions, patient/caregiver usability, real administrative friction, and where human review is required — keeping the product assistive, not clinical.

From prototype to real-world healthcare administration.

HACKATHON MVP

- 1 Document upload (bill, policy, scheme, hospital docs)
- 2 Evidence extraction into one shared case
- 3 Insurance / scheme pathway identification
- 4 Missing-document detection
- 5 Evidence-linked administrative next steps

Builds directly on modules that already run today — not built from scratch for this submission.

EXPECTED IMPACT

Less paperwork

Fewer repeated interactions

Better understanding of support

More transparent administrative journeys

Built on ArogyaRakshak. Validated with a clinical lead. Designed to expand beyond diabetes.
